

KITO

SHB

ULTRA-LOW HEADROOM
CHAIN HOIST

Lift right when space is tight.

Sometimes there's just not enough room above a load to use a standard hoist. That's where the low profile SHB hoist and trolley combo work where others can't. Built around the quality CB hoist with headrooms as low as 4.5 inches, the SHB is ideal for demanding industrial lifting applications where space is extra tight.

- 1 Ultra Low-Profile Lifting & Maximum Hook Travel**
With headroom as low as 4.5 inches, the SHB lets you use every inch of available space. The short headroom feature is specifically engineered to provide maximum hook travel that meets the demands of your constricted lifting application.
- 2 Permanently Attached Hand Geared Trolley**
Engineered to function as a single unit, the SHB integrates the proven performance and durability of KITO's standard CB Hoist with a permanently attached, industrial grade, hand-gear trolley.
- 3 Heavy-Duty Wheels & Steel Side Plates**
Heavy-duty lifting applications need heavy-duty equipment that can stand up to your demands. The SHB's cast trolley wheels and structural steel side plates take the weight and provide rigid support and reliability at the same time.
- 4 Maintenance-Free Sealed Trolley Bearings**
Focus on the task at hand, not the maintenance of your equipment. The maintenance-free trolley bearings on the SHB are sealed and life-long-lubricated providing you with years of smooth, reliable, quiet operation.
- 5 Adjustable For Tapered or Flat Flanged Beams**
Trolley wheels on the SHB are designed to work with both tapered and flat-flanged beams.
